

## **AMENDMENTS TO THE SPECIFICATION**

**Please add the following paragraph beginning at page 4, after line 1:**

Figure 6A shows a detail of a tool with a coolant/lubricant feed in accordance with another embodiment of the present application.

**Please replace the paragraph beginning at page 8, line 18, with the following rewritten paragraph:**

FIG. 6 shows a modified exemplary embodiment of a tool 1, specifically again in section along the line V-V which is illustrated in FIG. 3. Identical parts are provided with the same reference numbers, so that reference is made to the description for the preceding Figures. The sole difference over the tool 1 which is illustrated in FIG. 5 is that inserts 61 which form the supporting regions 27 and 29 are placed into the main body 17, or are at least provided here. In this case, it is possible to provide inserts which are of more or less rectangular design or else to insert a pin 62 into the main body 17, such as illustrated in Fig. 6A, said pin 62 being provided in each case in the region of the supporting regions and being used to support the cutter tip 7.--
